

## Warehouse Config Instructions for the TempTRIP App/BT-Retail-01 Logger

---

1.) Once you have submitted your reader registration request and a member of the TempTRIP Team has confirmed that your device is now registered, you can re-initialize your app from the sidebar menu.

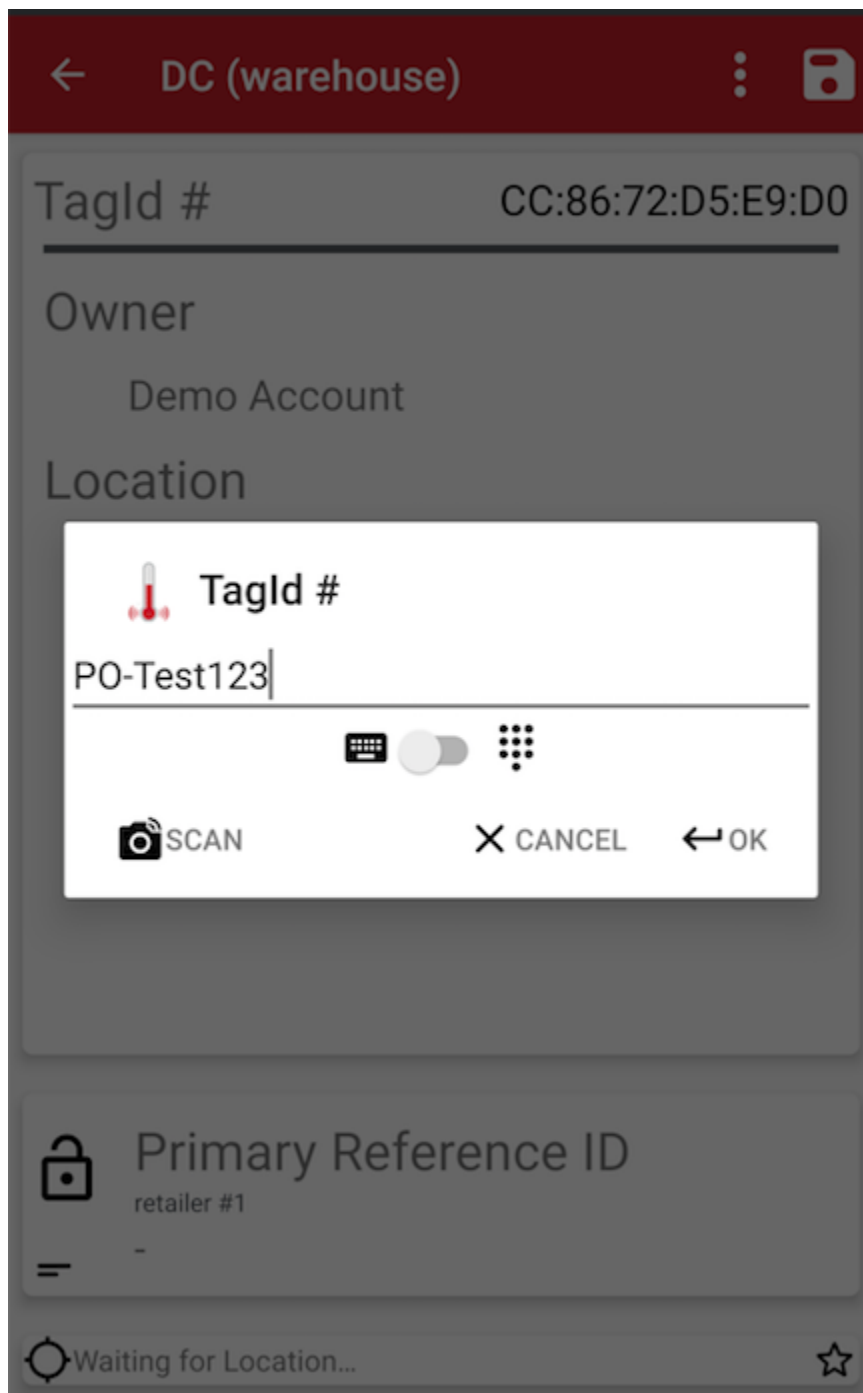

2.) When you receive a shipment, scan in the BT-Retail-01 Logger by selecting the 'Receiving' tab on your device.

3.) From here, hover your device over the logger to scan it in. You may have to use the flash button on the bottom left-hand side of your screen if the area you are reading the logger in is dark.

4. You will hear a beep once it is scanned in. You can then add the PO or Trip ID name or number in the next box that prompts. Press OK and this will save.

5.) This will then save the trip data into the TempTRIP App, and on the [TempTRIP Database](#).

6.) To assign a PO/Primary Reference ID to one of your loggers, select the 'Shipping' tab on your main screen.

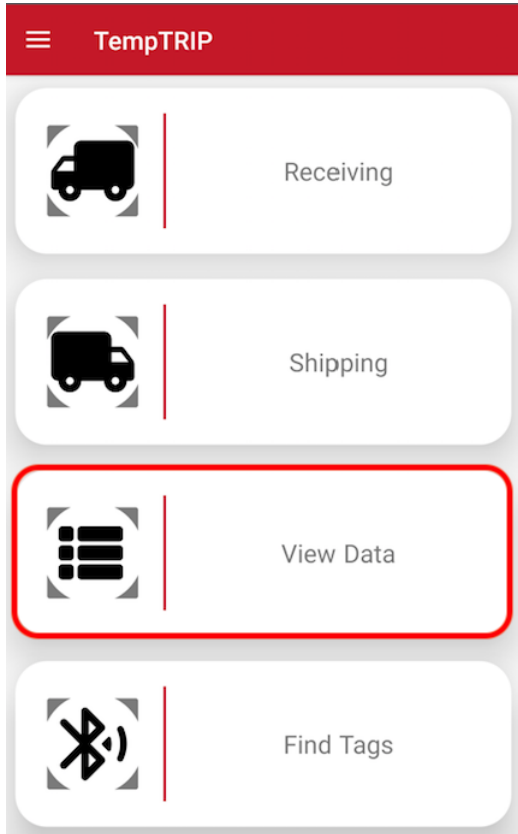

7.) Scan the logger that you would like to assign by hovering the device over the logger to scan it in. You may have to use the flash button on the bottom left-hand side of your screen if the area that you are in is too dark.

8.) You will hear a beep once it is scanned in. You can then add the PO or Trip ID name or number in the next box that prompts. Press OK and this will save the information on the TempTRIP App as well as through your personal login on the [TempTRIP Database](#).

9.) You can find all scanned-in trip data on your TempTRIP App by selecting the 'View Data' Tab on your App home screen.

11.) If you are looking to connect to a certain logger/previous trip on the app, please select the 'Find Tags' tab and then the 'Connect' button on the appropriate logger/trip.

12.) You can connect to multiple trips on the app by selecting and holding down each trip that you would like to connect to. The trips will highlight.

Once you have highlighted each logger, you can press the downward arrow

on the bottom right-hand side of your screen and then the

to connect and download all.
